

# **Unit 4033: Programmable Logic Controllers**

**Unit Code:** T/651/0760

**Level:** 4

**Credits:** 15

---

## **Introduction**

The programmable logic controller (PLC) has revolutionised the automation industry. Since Richard Morley's Modicon invention at General Motors in the 1970s, the PLC has been the standard solution for industrial automation. Today PLCs can be found in everything from manufacturing equipment to vending machines, and PLC system development for automated systems is a highly specialised and demanding area of engineering.

The aim of this unit is to enable students to understand the rationale behind the use of programmable logic controllers and their applications in industry. The unit combines practical skills and knowledge in developing PLC applications from real scenarios with theoretical principles, such as communication and networking protocols.

On successful completion of this unit students will have developed an understanding of the evolution, types and applications of PLCs. They will know how to select and develop a PLC system, integrate features of functional safety based on their understanding of risk management, and evaluate the wide range of communication technologies available on modern PLCs.

## **Learning Outcomes**

By the end of this unit students will be able to:

- LO1 Describe the design, operation and selection of PLC systems
- LO2 Explore Functional Safety within PLC systems
- LO3 Develop a PLC program for an automated process system
- LO4 Review how PLCs exchange information and process signals with other devices.

## Essential Content

### LO1 Describe the design, operation and selection of PLC systems

#### *PLC architecture and operation:*

central processing unit (CPU), data memory, program memory, speed, scan time, power supply, output current rating

Input/output (I/O) interface: digital, analogue, relay, transistors, TRIACs, opto-coupling.

#### *PLC types and selection:*

Compact, modular and rack-mounted

Distributed control systems and programmable automated controllers

PLC manufacturers

Latest PLC case studies.

### LO2 Explore Functional Safety within PLC systems

#### *Functional Safety standards:*

Evolution of Safety and Risk management

IEC61508 (Electrical, Electronic and Programmable Equipment)

IEC61131 (PLCs), IEC61131-3 (Languages)

IEC61511 (Process Control) IEC62061 (Machinery)

Hazard and risk assessment

Hazard and operability analysis (HAZOP)

Failure modes and effects analysis (FMEA)

Fault tree analysis (FTA)

Safety integrity levels, redundancy (back-up or failsafe).

### LO3 **Develop a PLC program for an automated process system**

#### *Logic control circuits:*

AND, OR, NAND, NOR, XOR, combinational logic, latching circuits.

#### *Number systems:*

Binary, decimal, hexadecimal, octal number representation and conversion

Memory: bits, bytes, nibbles, word, long/double

Signed and unsigned values.

#### *PLC programming:*

Industrial Standard IEC61131; PLC software tools

Ladder logic operation: rungs, input, process, output

Variables: Boolean, integer, floating point

Inputs, outputs, delay functions, timers, counters, latches, registers, comparison blocks, math operators, function blocks, simulation, debugging, hardware testing, fault finding

Peer review of programming activities (e.g., design, code, test plan), program demonstration and profession discussion including good practice.

#### *Documentation:*

Requirements and specification, flow chart, functional chart, sequence table, input/output or allocation list, wiring diagram, test data.

#### **LO4 Review how PLCs exchange information and process signals with other devices**

##### *Digital communication basics:*

Digital versus analogue communication: analogue to digital conversion (ADC), digital to analogue conversion (DAC)

Sampling rate, resolution, errors

Noise: decoding, encoding, pulse code modulation (PCM)

Elements of a digital communication system; digital communication medium.

##### *PLC communication and networking:*

Fieldbus, profibus, modbus, ethernet, profinet

OSI model, RS232, RS485, USB, parallel, serial

Controlled area network (CAN)

Supervisory control and data acquisition (SCADA)

Remote terminal unit (RTU)

Human-machine interface (HMI).

## Learning Outcomes and Assessment Criteria

Pass	Merit	Distinction
<b>L01</b> Describe the design, operation and selection of PLC systems		<b>D1</b> Justify the selection of a programmable logic controller for a given application.
<b>P1</b> Describe the architecture and operation of programmable logic controllers.  <b>P2</b> Compare the design and applications of Compact, modular and rack-mounted PLCs.  <b>P3</b> Describe the range of input/output devices and PLC interface techniques.	<b>M1</b> Analyse the suitability of programmable logic controllers (PLCs) with programmable automation controllers (PACs) for given applications.	
<b>L02</b> Explore Functional Safety within PLC systems		<b>D2</b> Evaluate functional safety and its integration into PLC systems to minimise hazards and risks.
<b>P4</b> Explore the requirement of functional safety within industrial PLC systems.  <b>P5</b> Compare the range of IEC6113-3 languages and their applications.	<b>M2</b> Apply functional safety analysis on a PLC based automated process system.	

Pass	Merit	Distinction
<b>L03</b> Develop a PLC program for an automated process system		<b>D3</b> Evaluate the PLC program for an automated process system and make justifiable modifications.
<b>P6</b> Translate a digital logic control circuit into an equivalent PLC program.  <b>P7</b> Produce design and planning documentation associated with the preparation of a PLC program.  <b>P8</b> Design and develop a functionally safe PLC program for an automated process system.	<b>M3</b> Apply methods of testing and debugging hardware and software in PLC systems.	
<b>L04</b> Review how PLCs exchange information and process signals with other devices.		<b>D4</b> Evaluate fieldbus and Ethernet technologies for industrial manufacturing applications.
<b>P9</b> Describe the characteristics and methods of digital data communication for PLCs.  <b>P10</b> Review common communication technologies available on a range of PLCs.	<b>M4</b> Assess the use and integration of SCADA and HMI's with PLCs in industry.
